PROFESSIONAL SUMMARY

Software Engineering student at Daffodil International University (CGPA 3.78/4.00) and Software QA intern at Goinnovior Limited. I combine ISTQB-aligned QA coursework (black-box design techniques, structural testing, defect lifecycle management) with hands-on full-stack development. Competitive programming (240+ problems solved) trained my instinct for edge cases: finding where logic breaks, not just where it runs. I have root-caused and fixed multiple state-management defects in a personal application, and I am building AI/ML fundamentals with a focus on agentic systems.

EDUCATION

B.Sc. in Software Engineering · Daffodil International University (DIU), Savar, Dhaka — 2024 – Present

- Current CGPA: 3.78 / 4.00
- Coursework: Software Testing and Quality Assurance, Data Structures and Algorithms, Database Systems, Machine Learning, Computer Networking, Software Engineering Principles

PROFESSIONAL EXPERIENCE

Software Quality Assurance Intern · Goinnovior Limited — Aug 2026 – Present

Dhaka, Bangladesh (on-site) · IT services and consulting

- Design and run manual test cases on client web applications using Equivalence Partitioning, Boundary Value Analysis and Decision Table techniques
- Log and track defects through the full bug life cycle, documenting reproduction steps and root cause so developers can fix faster
- Work with developers and QA teammates to verify fixes and check regression coverage across releases

PROJECTS

Overload: Progressive-Overload Workout Tracker (Web App) — 2025 – Present

github.com/adilsay3d22/OverLoad

- Designed and built a full-featured workout tracker from scratch in vanilla JS, HTML and CSS: set logging, rest timers, personal-record detection, per-exercise progress charts and CSV export, across six-plus versions
- Diagnosed and fixed critical state-management defects, including a shared-array-reference bug across cloned training weeks and a data-threading bug in the progress-hint engine, through systematic root-cause debugging
- Now generalizing it into a public-facing product built against a locked PRD and architecture specification, backed by an 800+ exercise library and a storage abstraction layer for future backend integration

AR/VR Game Development Lab Landing Website · Frontend Designer — 2025

- Designed and built the frontend of the lab's landing website with a team, owning UI design and layout

Gesture Recognition Glove · Team Lead — 2024

- Led a 3-person team to design a wearable glove that translates hand gestures into text and speech in real time
- Developed and tested the companion mobile app in MIT App Inventor for gesture-to-speech output

Robotics Engineering · Team Member — 2024 – 2025

- Built an Tested an Ai Based Personal Voice Assistant Using ESP323 with a team of 4
- Built and tested four autonomous robots in a 3-person team: 4WD chassis, line following, obstacle avoidance and self-balancing
- Handled sensor integration (IR, ultrasonic, gyroscope) and validated embedded control logic across repeated test runs

TECHNICAL SKILLS

Testing and QA: manual testing, test case design, ISTQB-aligned techniques (Equivalence Partitioning, Boundary Value Analysis, Decision Table, State Transition), bug life cycle, root-cause debugging

Structural testing (coursework): Basic Path Testing, Control Flow Graphs, Cyclomatic Complexity, Data Flow Testing, Mutation Testing

Languages: C, C++, Java, JavaScript, Python

Data and ML: NumPy, Pandas, Scikit-learn
Databases: SQL, relational database design, query optimisation
Dev tools: Git and GitHub, VS Code, Jupyter Lab, Claude Code, AntiGravity
Creative and design: Adobe Photoshop, Adobe Illustrator
Office: Excel (advanced), PowerPoint, Word
Competitive programming: 240+ problems solved across Codeforces, AtCoder and Beecrowd

AI AND AGENTIC WORKFLOW

AI/ML training: following a structured AI/ML curriculum via Apna College, with a focus on agentic AI systems
AI agents: familiar with agentic frameworks and tool orchestration; regular user of Claude Code and OpenClaw for autonomous coding workflows
Generative AI: built multi-step image-generation pipelines in ComfyUI and set up a fully local image-generation agent on personal hardware

ACHIEVEMENTS AND ACTIVITIES

ICPC 2024 · Team Lead, DIU competitive-programming team 2024

- Led a team of three ThorughOut the competition journey and solved 240+ problems across Codeforces, AtCoder and Beecrowd personally

Visual Identity Designer · Breakout Algorithm Contest, Software Engineering Club, DIU 2025

- Sole designer of the contest's complete visual identity (logo, posters and brand materials), from concept to final deliverable

Freelance Graphic Designer · Independent 2022 – 2024

- Delivered branding, poster and social-media design for local clients; managed briefs, revisions and deadlines on my own

CLUB AND LAB MEMBERSHIPS

- Executive Member, Development Wing, AR/VR Lab, Daffodil International University (ongoing)
- Executive Member, Robotics Lab, Daffodil International University (ongoing)
- General Member, Software Engineering Club, Daffodil International University (ongoing)

LANGUAGES

Bengali (native) · English (proficient) · German (A1, currently studying)

INTERESTS

Software engineering · Software testing and QA · AI/ML and agentic workflows · Competitive programming · Robotics · Digital design
